Integrity Flags

0 Integrity Flags for Review

Our system's algorithms look deeply at a document for any inconsistencies that would set it apart from a normal submission. If we notice something strange, we flag it for you to review.

A Flag is not necessarily an indicator of a problem. However, we'd recommend you focus your attention there for further review.

1. INTRODUCTION

1.1. Introduction to project

We were assigned to the group of five to do the project work on January 12th 2025. The given project work was to make an e-commerce website of Watch that sells many kinds of hand watches. We used **HTML,JavaScript and CSS and LiveServer** to create a website. We develop homepage, blog list, product list, research and references and about us i.e our company. This work was equally divided among five people which made it easier to develop this website. In this documentation, we did very hard work to come to the conclusion and develop this website.

1.2. Goals and Objectives

The main goal of our project was to develop a helpful website and fully functional e-commerce website. And the main objectives of this project was to give students knowledge and understanding of the codes , web development and ability to work in a group.

1.3. Verdict

Our group was assigned to develop a ecommerce website for watches. We used **HTML,JavaScript,CSS and LiveServer** to build this website. Our website includes "Homepage,Product Page, Blog page, Research and About Us". Each member made equal contribution and hard work that made our project smoother and attractive and successfully completed the website.

2. Discussion and Analysis

2.1. Balsamiq Wireframe

Balsamiq Wireframe is a tool used to create and design wireframes, which are simple sketches of a website or website layout. It is like drawing rough before building a house. Balsamiq lets us create simple wireframe that helps everyone focus on the structure and flow of the design. This tool helps designers to plan before developing an actual website. It is fast, easy to use and collaboration. With the help of balsamiq, we can turn idea into a visual concept. (www.tutorialspoint.com)

2.2. Visual Studio Code(VS CODE)

Visual Studio Code(VS Code) is a coding tool which combines various tools to make programming easier and effective. It is a very popular and free code editor. It has highlighting features that give colors to differentiate parts of our code which makes us easier to read. It helps in developing websites.

3. Technologies used in this project

3.1. Hypertext Markup Language(HTML)

The set of markup symbols or codes added to a file that is meant to be seen online is known as HyperText Markup Language, or HTML. The markup instructs web browsers on how to present the text and graphics on a webpage. It is how internet users surf the web; they are taken to new pages by clicking on unique text known as hyperlinks

3.2. Cascading style sheets(CSS)

Cascading style sheets are referred to as CSS. It explains to the user how to properly display HTML components on the screen. The language used to style HTML texts is called CSS. To put it simply, cascading style sheets are a language that makes creating a webpage easier. Certain sections of the webpage are handled via CSS. In addition to many other things, CSS allows us to regulate the font style and color of the text as well as the distance between paragraphs. Although CSS is simple to comprehend, it offers powerful control over HTML texts. HTML and CSS are combined

3.3. Javascript

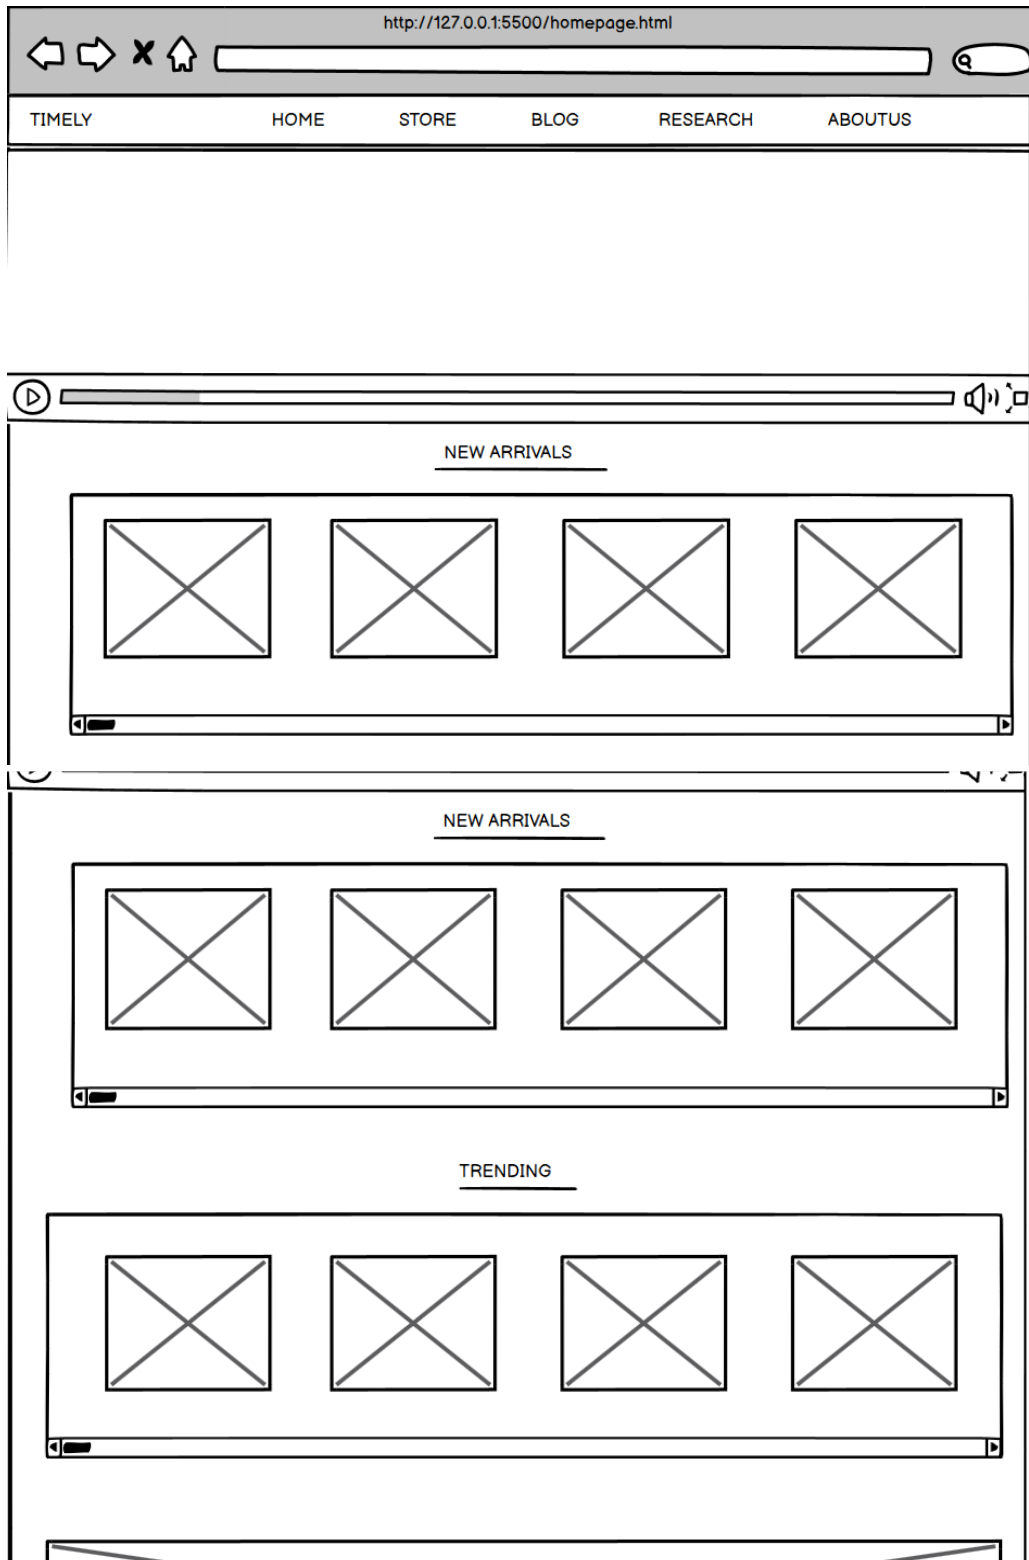

Web developers frequently utilize the computer language JavaScript to create websites, apps, servers, and even video games. JavaScript, CSS, and HTML are all interrelated. JavaScript is a useful language to learn because of its extensive use in web, mobile app, and game development.

3.4. LiveServer

When you save your files in HTML, CSS, or JavaScript using Live Server, it automatically refreshes the browser to show the newest changes. This removes the need to constantly open the refresh button, hence increasing your productivity a great deal. This process is automated by the Visual Studio Code Live Server extension, which sets up a local development server

The iconic design of the rose gold case and bezel with a rounded octagonal shape is enhanced by the contrast between polished and satin-brushed finishes. The contemporary "sporty chic" style is reinforced by the blue-gray dial and composite strap with Aquanaut pattern.

Conclusion

In conclusion we develop a e-commerce website watch using html, css, javascript and live server. We created home page, product page , blog , references and about us . We as a group of 5 distributed the given task to 5 members. It took us long time but with our hard-work and dedication we completed this project successfully.
